

Use Case Document for Save Contact and Show Custom

Use Case Name	Save Contact Info		
Version	1.1		
Created By	Bryan Anderson	Last Updated By	Bryan Anderson
Creation Date	6/15/19	Last Update Date	6/15/19
Summary	A web form is displayed asking for basic contact information. Clicking on the button then displays the information you've entered for verification.		
Preconditions	The Tomcat Server has to be initialized.		
Triggers	Opening up the index page on the local server.		
Main Success Scenario	The input data is correctly captured.		
Alternative Success Scenario	None		
Postconditions	The customer data is correctly displayed in another webpage.		
Business Rules	For use with personal contacts.		
Notes	The data currently available for saving is a contact's first and last name, email, and phone number.		

Use Case Name	Show Custom		
Version	1.1

Creation Date	6/15/19	Last Update Date	6/15/19
Summary	User chooses numbers that relate to words in arrays to create a custom crazy sentence.		
Preconditions	The user will select the crazy sentence game from a menu.		
Triggers	User selects the letter "c" to begin the game.		
Main Success Scenario	Valid numbers are selected and the program continues.		
Alternative Success Scenario	Invalid numbers will display an error message asking them to try again.		
Postconditions	The sentence/error is displayed out to the user for their pleasure and enjoyment.		
Business Rules	Words are currently generalized.		
Notes	If additional words are to be added, further adjustments will have to be made.
